Process A
Process B
10
Test for Dysfunction
Negative
16
Perform Combined Test For Neurological Inhibition
Negative
22
END
Positive
Positive
12
Perform corrections for dysfunction
18
Perform Corrections for improper neurological inhibition
14
Re-test Original Test
20
Re-test Original Test

Figure 1

Process A

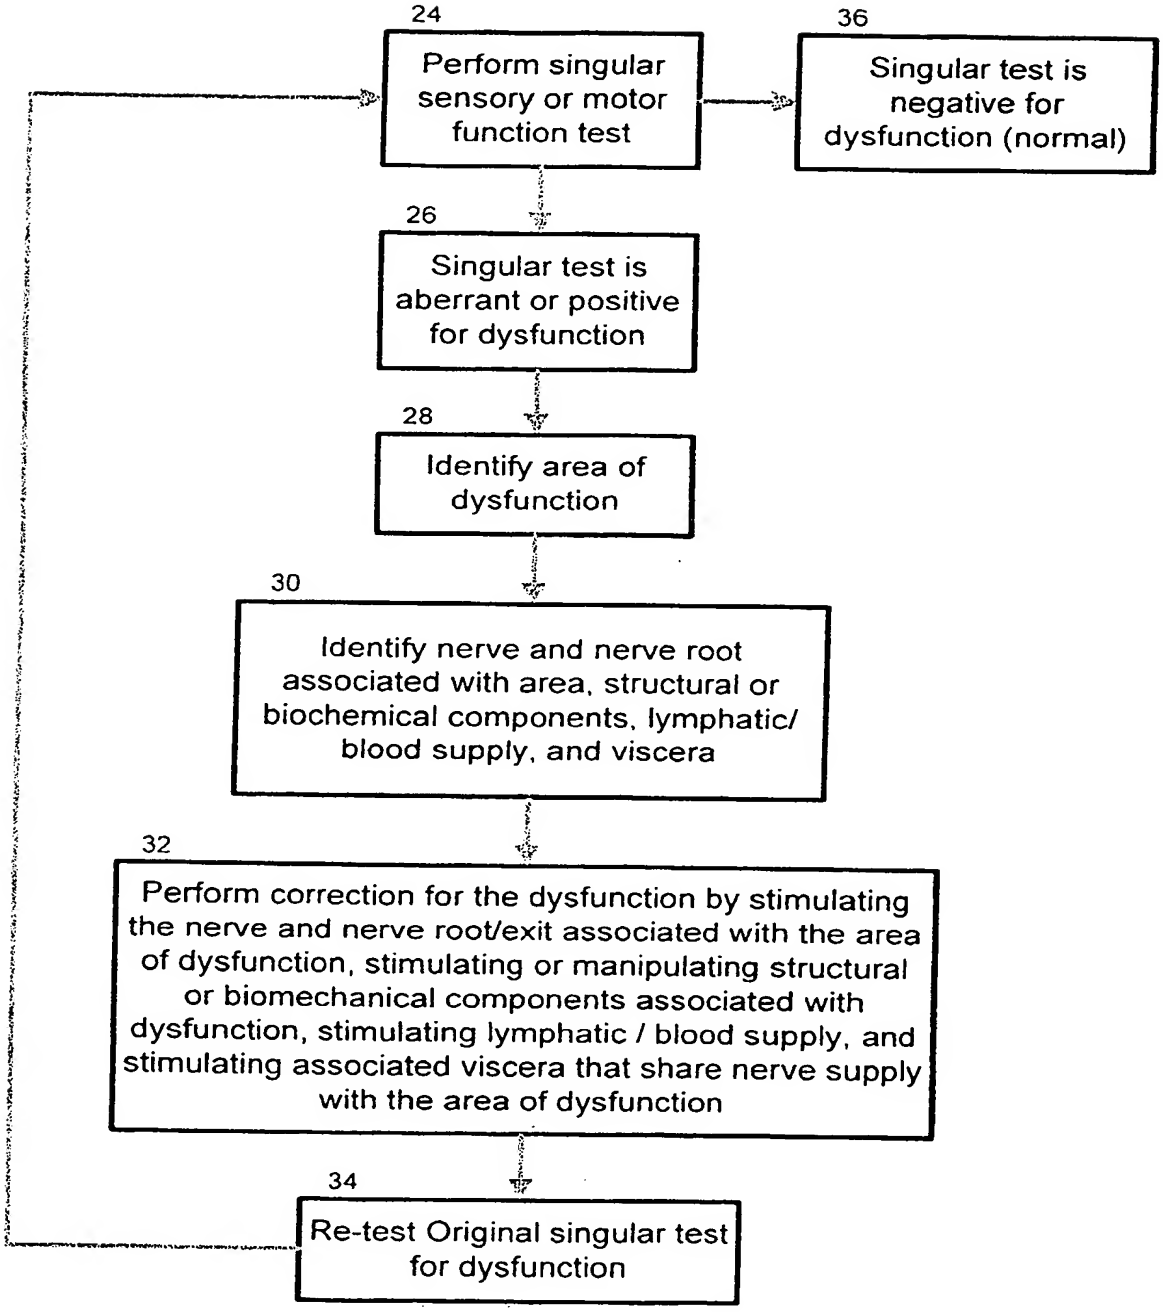

Figure 2A

Process B

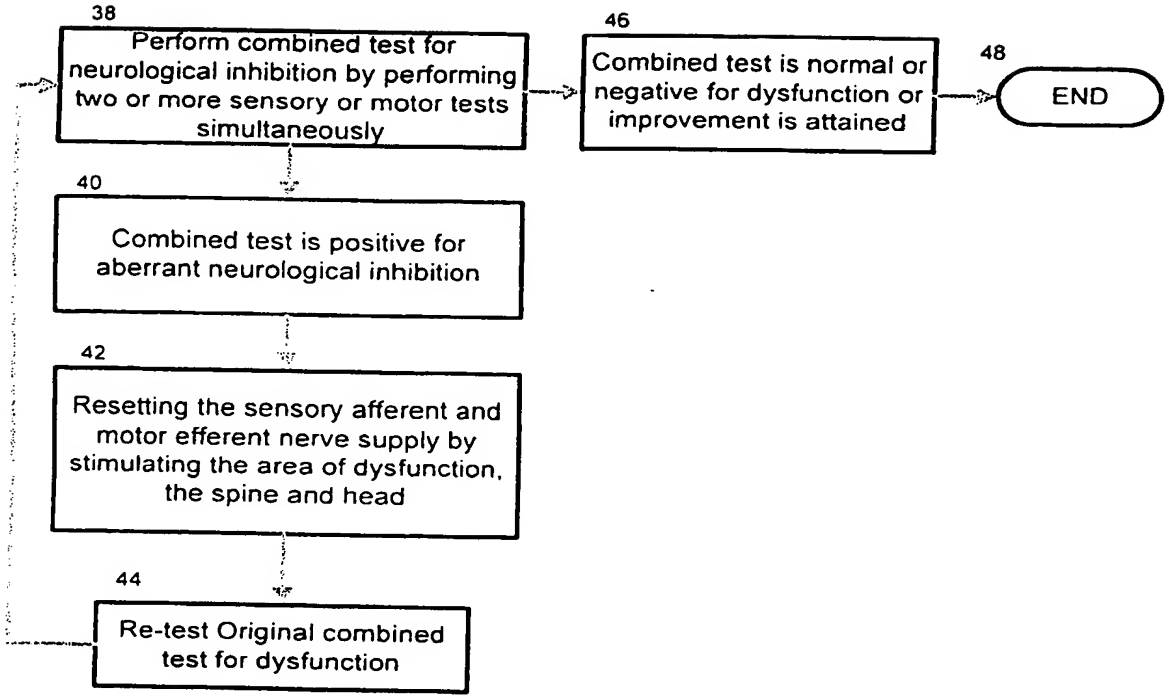

Figure 2B

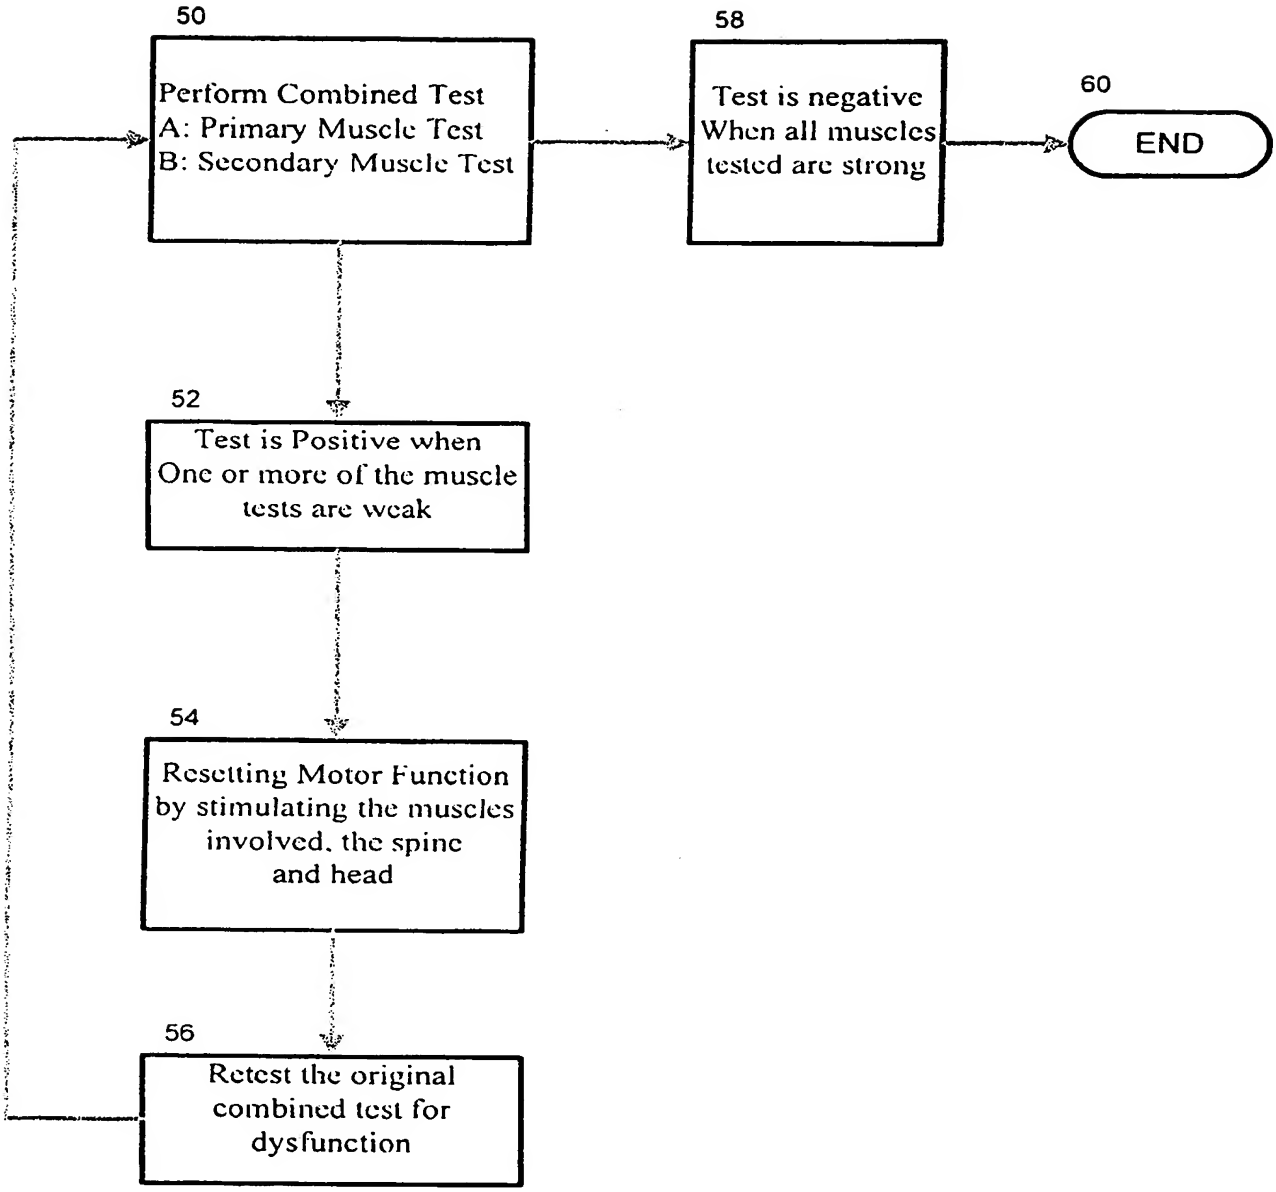
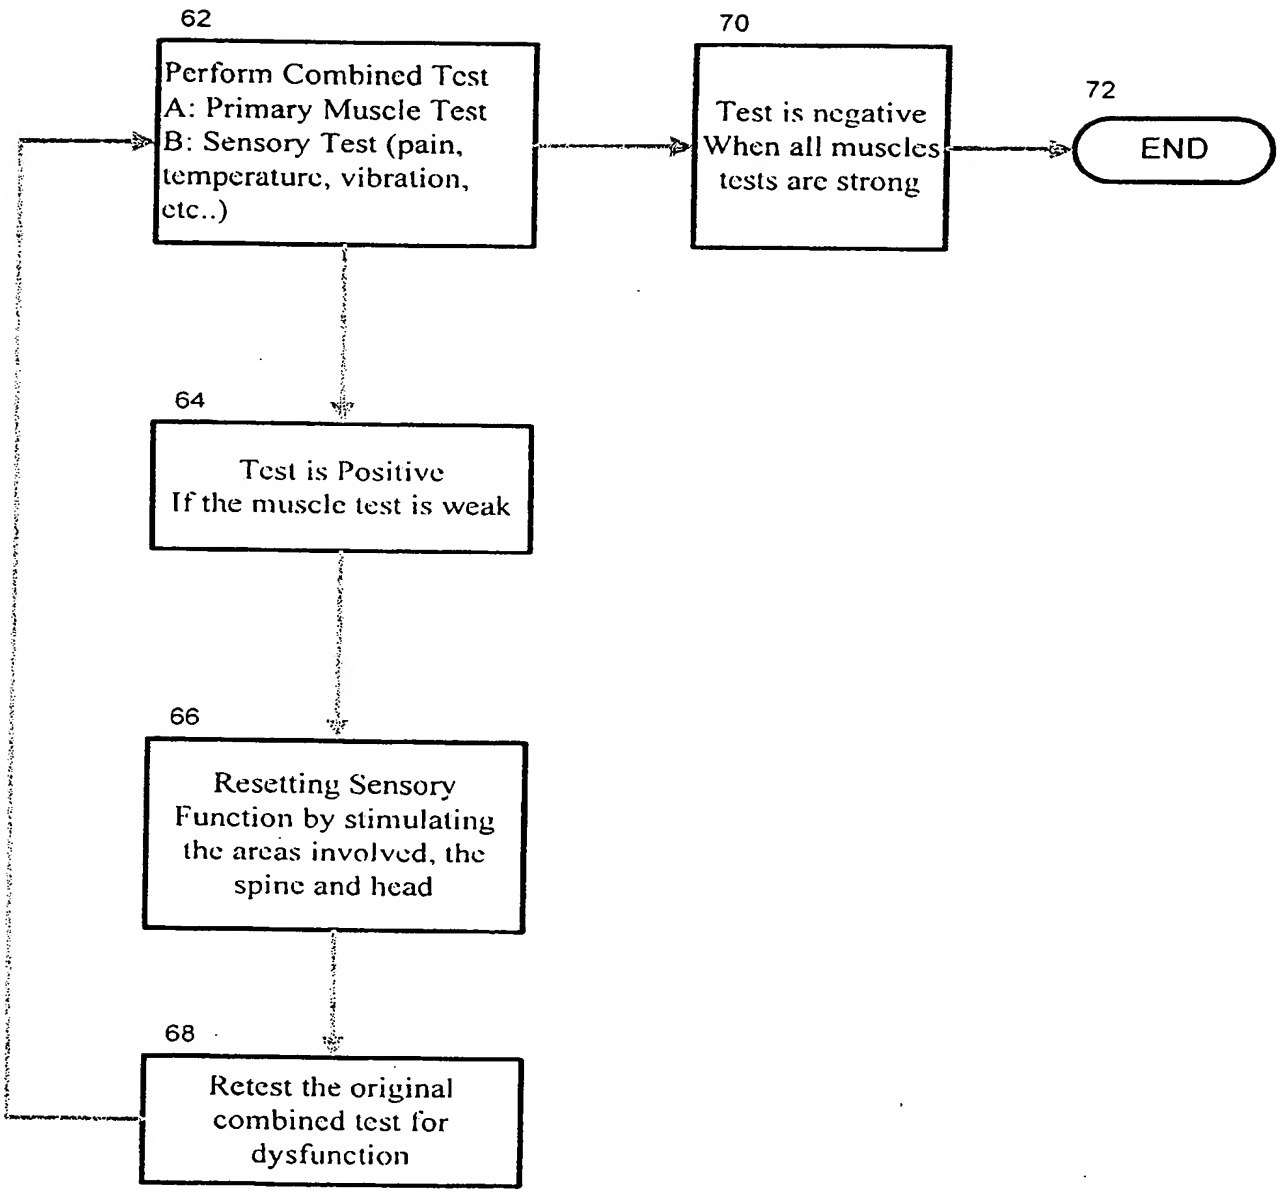


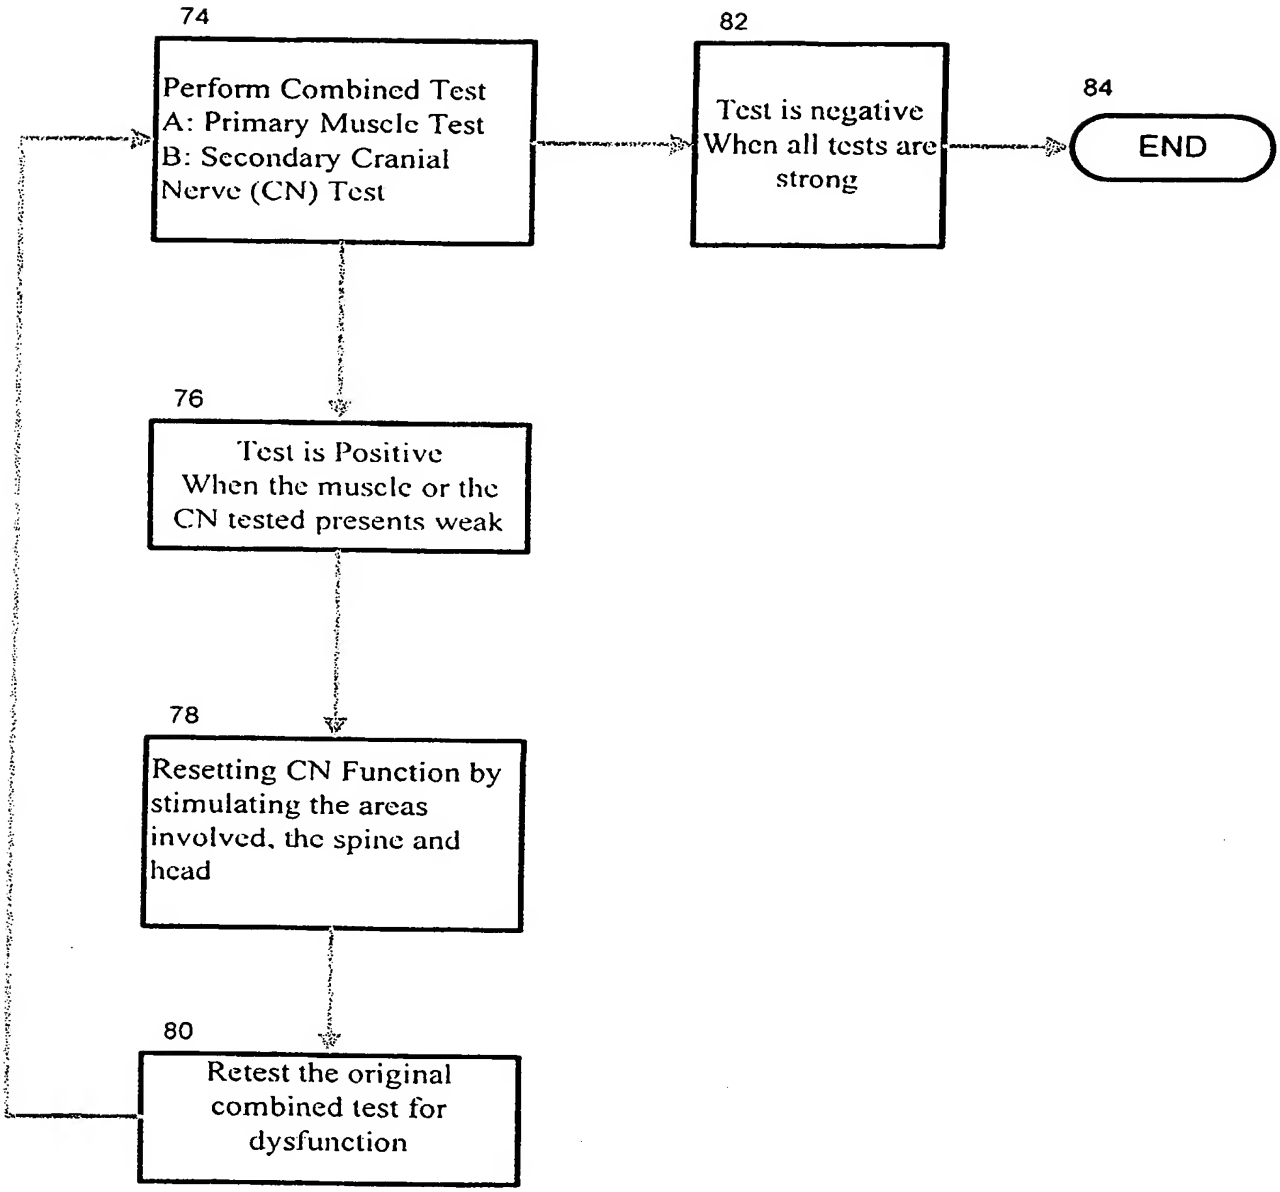
50
Perform Combined Test
A: Primary Muscle Test
B: Secondary Muscle Test
58
Test is negative
When all muscles
tested are strong
60
END
52
Test is Positive when
One or more of the muscle
tests are weak
54
Resetting Motor Function
by stimulating the muscles
involved, the spine
and head
56
Retest the original
combined test for
dysfunction

Figure 3



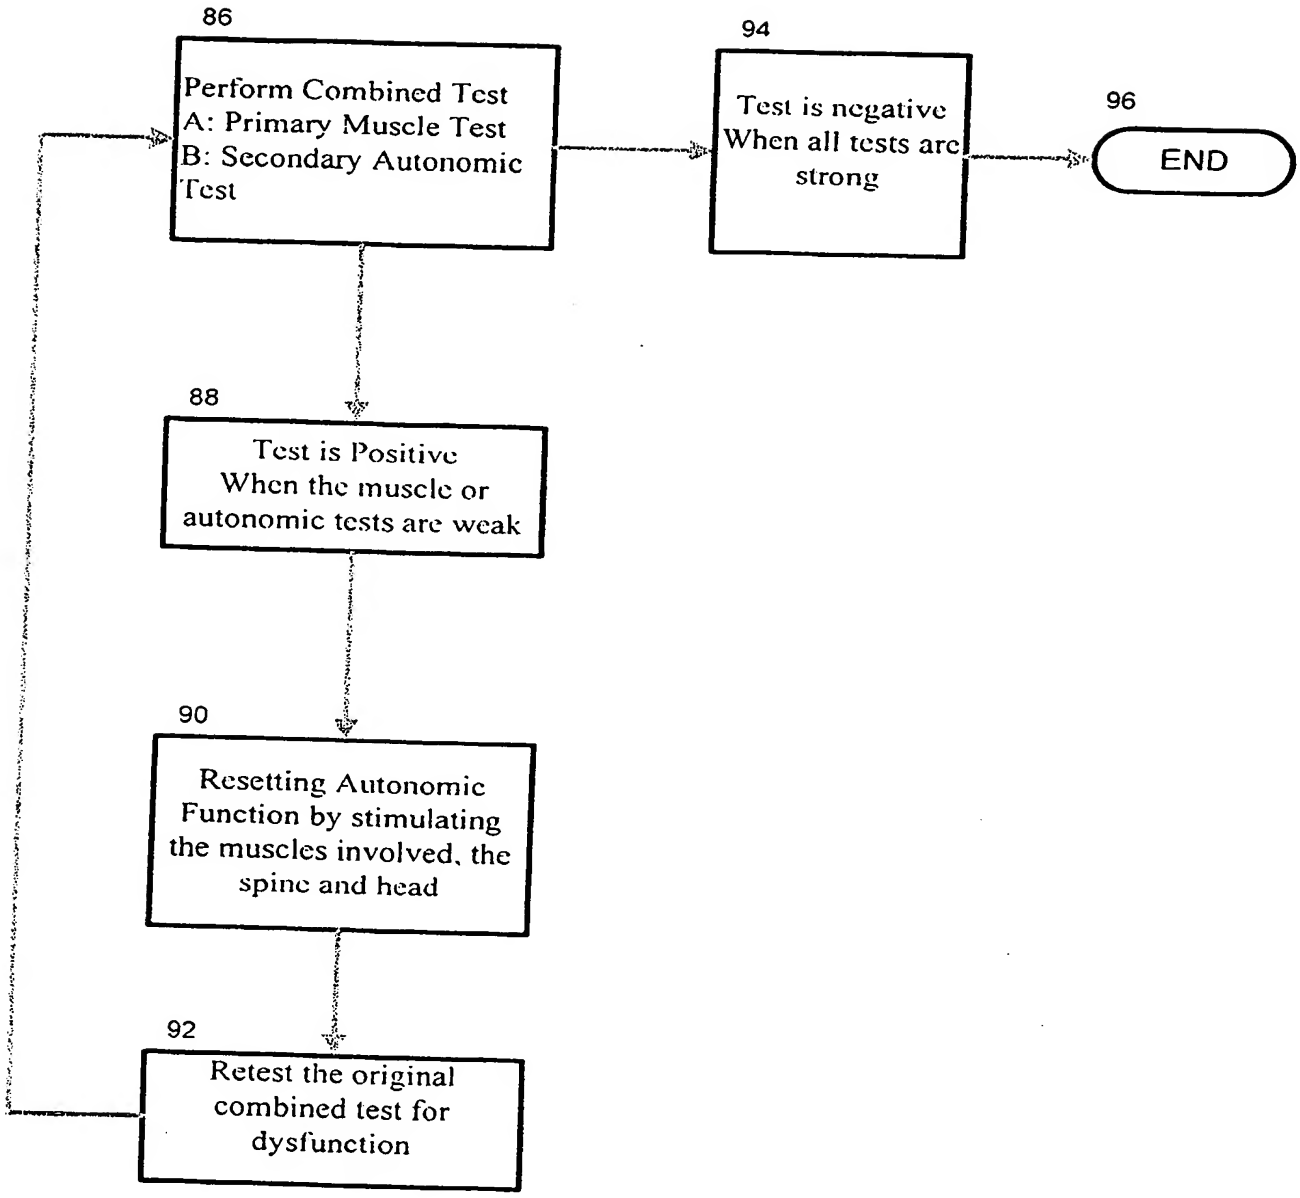
62
Perform Combined Test
A: Primary Muscle Test
B: Sensory Test (pain, temperature, vibration, etc..)
70
Test is negative When all muscles tests are strong
72
END
64
Test is Positive If the muscle test is weak
66
Resetting Sensory Function by stimulating the areas involved, the spine and head
68
Retest the original combined test for dysfunction

Figure 4



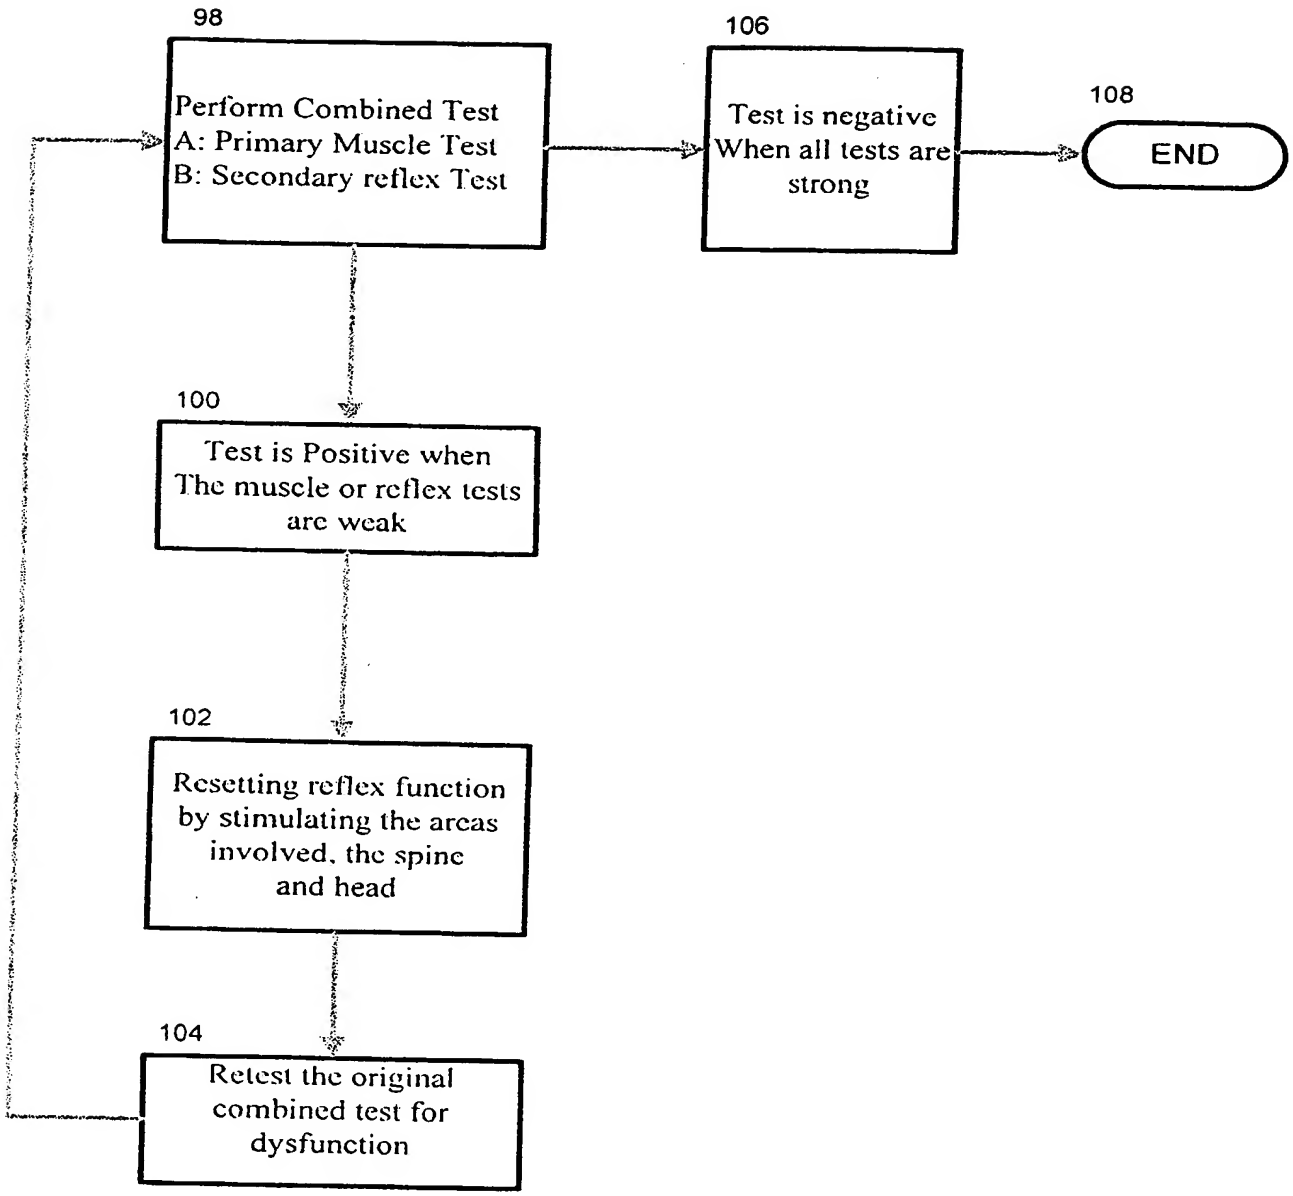
74
Perform Combined Test
A: Primary Muscle Test
B: Secondary Cranial Nerve (CN) Test
82
Test is negative When all tests are strong
84
END
76
Test is Positive When the muscle or the CN tested presents weak
78
Resetting CN Function by stimulating the areas involved, the spine and head
80
Retest the original combined test for dysfunction

Figure 5



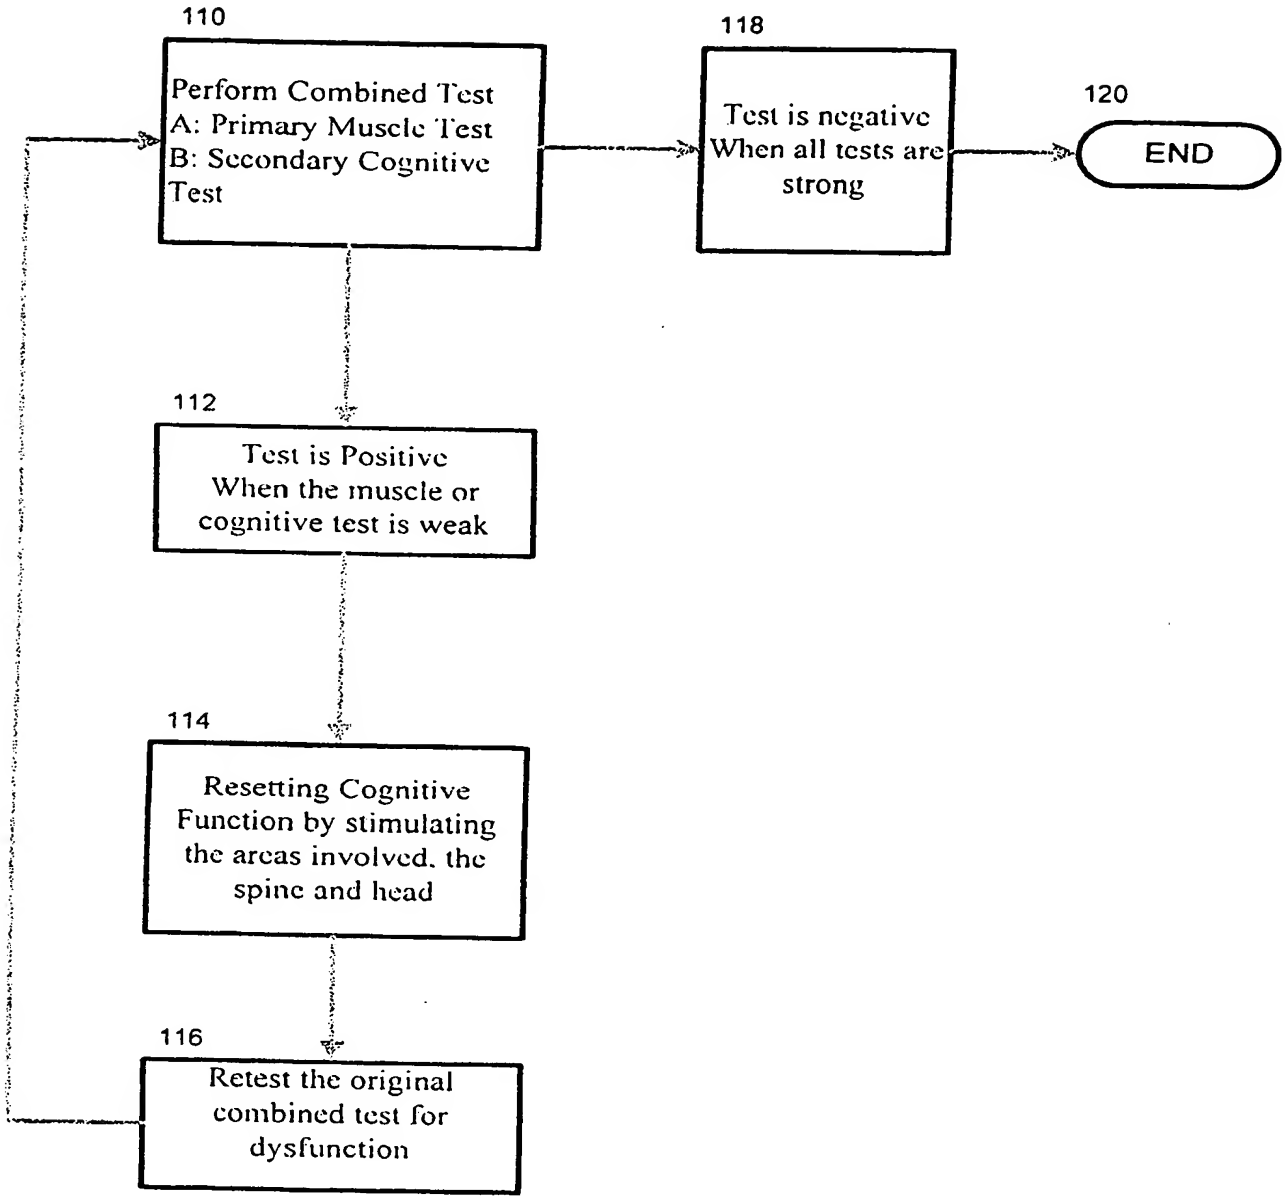
86
Perform Combined Test
A: Primary Muscle Test
B: Secondary Autonomic Test
94
Test is negative When all tests are strong
96
END
88
Test is Positive When the muscle or autonomic tests are weak
90
Resetting Autonomic Function by stimulating the muscles involved, the spine and head
92
Retest the original combined test for dysfunction

Figure 6



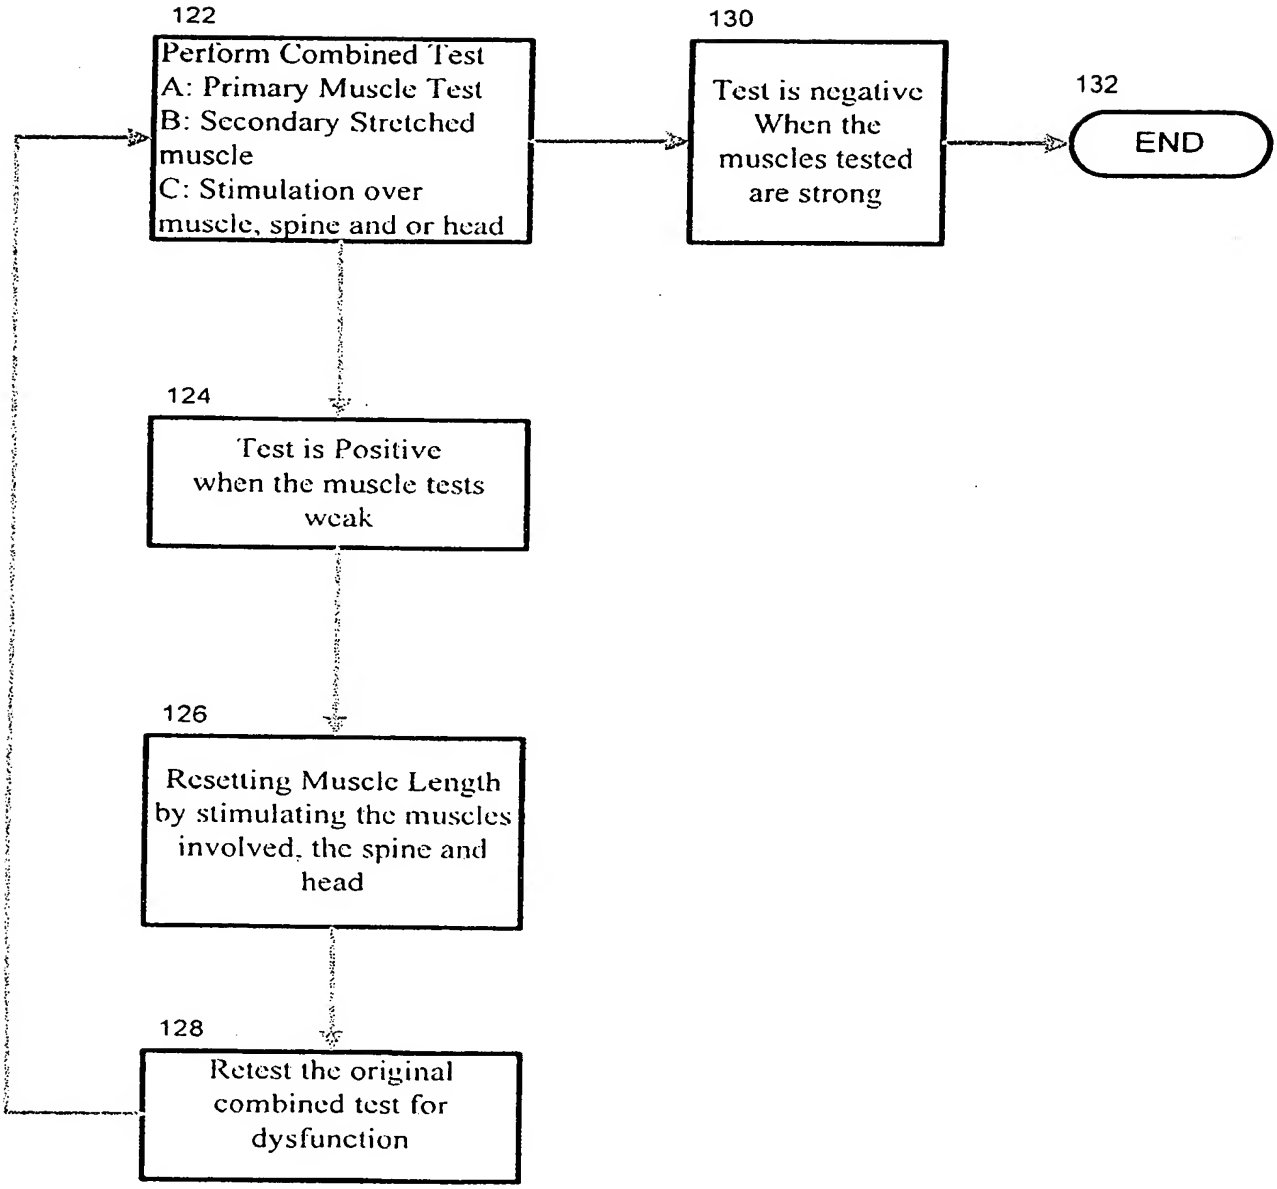
98
Perform Combined Test
A: Primary Muscle Test
B: Secondary reflex Test
106
Test is negative
When all tests are
strong
108
END
100
Test is Positive when
The muscle or reflex tests
are weak
102
Resetting reflex function
by stimulating the areas
involved, the spine
and head
104
Retest the original
combined test for
dysfunction

Figure 7



110
Perform Combined Test
A: Primary Muscle Test
B: Secondary Cognitive Test
118
Test is negative When all tests are strong
120
END
112
Test is Positive When the muscle or cognitive test is weak
114
Resetting Cognitive Function by stimulating the areas involved, the spine and head
116
Retest the original combined test for dysfunction

Figure 8



122
Perform Combined Test
A: Primary Muscle Test
B: Secondary Stretched muscle
C: Stimulation over muscle, spine and or head
130
Test is negative When the muscles tested are strong
132
END
124
Test is Positive when the muscle tests weak
126
Resetting Muscle Length by stimulating the muscles involved, the spine and head
128
Retest the original combined test for dysfunction

Figure 9
